A Visit to the Essex County Asylum for the Insane.

We now proceeded to the dining-room to watch the patients come in to dinner. Those who were working outside, stop ped on their way in at a closet, where they exchanged their shoes for slippers. This is done to preserve cleanliness. We asked the Superintendent if he experienced any difficulty in enforcing these rules. H said after they were once impressed upon the mind of the patient it was not so dif ficult. Discipline is the keystone to the situation: a discipline which, while restraining in its influence must be exercised in such a manner as to conceal all apparent restraint.

A bell was rung by an attendent as signal to the patients that dinner was ready. They marched to their places i an orderly ma ner; the women going to the right, the men to the left. The din ing room, the tables and dishes presented the same appearance of cleanliness and order that was observable all through the institution. The dinner was what is called in the asylum a fish dinner, and consisted of bread and butter, potatoes and baked fish, with rice and sauce. The food had every appearance of being of the best quality and was served in sufficient quantity. While we were watching the patients at their meal, we took the opportunity to ask the Superintendent a few questions, in relation to the asylum and its inmates. He said that the majority of patients received at the asylum were females. The causes that brought on the disease, aside from idlocy, imbecility and inherited predisposition, were sickness and poverty. Violent outbreaks were not frequent among the patients; attendants were always on the watch to arrest any such symtoms. The asylum was well supplied with all the latest improved devices for managing such cases, bed straps, chair straps, camsiles and other necessary means. In ordinary cases of misbehavior, seclusion was the method adopted, and which proved most

Childishness is the prevailing character istic. Attendents must be constantly de vising means to keep patients busy who can do any kind of work. Some of the female patients are wonderfully skillful in fancy work. From work of this class done by the patients, enough has been realized to purchase an organ, a showcase and stand, in which goods are exhibited The funds realized in this manner are also devoted to furnishing amu ement for the patients, hiring a band to play on the lawn

in summer, for instance. The majority of cures occur during the first six months of confinement. After the year has expired the chances diminish rapidly, yet there were exceptional cases where recovery had been witnessed after several years confinement. About 50 at tendants were employed about the asylum, of which about 30 are fen ales and 20 males. At the dinner table we saw the only instance of unruliness that we wit nessed during our visit. A female patient was acting after the manner of a naughty child because something did not just suit her. The doctor said to her in a quiet yet decided way, now Mrs. - you wil have to get away from the table and 10 down stairs, if you do not behave yourself. That quieted her.

Doctor Hinckley is a man eminently adapted to work of this nature. It is his hobby, so to speak. He has made a life long study of insanity, and is perfectly familiar with its phenomena and causes As you accompany him through the in stitution, you are impressed with his thorough knowledge of each individual case. The following incident is illustrative of his influence over the patients. In passing through one of the wards an old lady arose with the evident determination of following us. We anticipated annoyance. When we reached the entrance to the next ward. the Doctor turned, and making a bow, in a polite way bid her good day. She seemed to understand that her company was unnecessary, and went back to her place. Patients throughout the various wards seemed to be on familiar terms with him Ridiculous questions from patients were answered in a manner evidently very satisfactory to the patients. It is evident that the man required to fill a position like this, is a man whose whole soul is in the work, and the Essex County Institution Managers have acted wisely in selecting Doctor Hinckley to superintend the Insti-

Leaving the dining room, we passed out into the boiler room. The steam used in the cooking and laundry departments and for heating purposes, and in furnishing the necessary motive power, is generated in 6 boilers, 2 of 45 horse power and 4 of 30 horse power each. The boilers are supplied with all the improved appliances for insuri g efficiency and safety. A coal shed is connected with the boiler room, with a

capacity of storing 500 tons of coal. It the pumping room are three compound automatic steam pumps of the Worthington make. These pump the water from an immense cistern, and force it into 9 (xx) gallon tanks situated in the top the 3 t story. There is also a Knowles purp. which is connected with a well 50 feet deep, from which water is drawn and forced to the tanks and used for drinking and cooking purposes. The water obtained from the well is of a superior quality. Previous to erecting these pumps the Newark water Company supplied all the water used in the institution at a cost of \$2,000 per year. Now the only water supplied by the city is that used for laundry purposes. It is estimated that the net savings realized by the pump system will be about \$1,100 per year. The superiority the water was manifest during the warmest weather last summer, when city water was scarcely fit to drink. The water supplied to the patients never exceeded temperature of fifty-four degrees. A 25 horse power engine, a compact looking

machine of the horizontal type, furnishes the motive power used throughout the building. There is a small machine shop connected with the asylum, in which a great deal of the necessary repair work is done. An

Otis elevator worked by hydraulic power,

carries you from the bottom floor to the top. The clumsy wooden gates formerly guarding the entrances to the elevator have been tak n down and light, ornamental, convenient iron gates substituted. All through the corridors at regular intervals, shelves are put up, on which are neatly arranged lengths of hose, to be used in case of fire. The hose is attached to water pipes, which lead from the tanks, all through the building. The laundry is supplied with shafting and pullies, used in running two large washing machines and an improved wringing machine, by which the water is extracted from the

clothes by centrifugal force. In the baking department, where about 10 barrels of flour are used per week, we were shown bread which compared favorably in appearance and quality, with any displayed in the bakeries.

In the cooking department, where pota toes are cooked by the bushel, and coffee made by the gallon, all the improved devices for expediting and systemizing the work are found. Part of the cooking is done by steam, and part on a long row of ranges extending through the centre of the

In the supply room you find barrels o flour, sugar, boxes of tea, coffee, rice and other things, reminding you of a whole sale grocery store. This room contains a large ice box with a partition in it: on one side the meat is kept, on the other such provisions as are injured by excessive heat. Beef is bought by the whole side and mutton by the carcass, flour is bought by the car load. It is the policy of the asylu n managers to buy on a large scale, thereby gaining all the a 'vantages of the

In the sewing department a large number of female patients are engaged i mending torn garments and making new ones. Throughout all these various departments you find systematic arrangement and order, combined with cleanli-

The labor in the various departments is performed by the patients under the management of competent attendents In the medical department is kept a 'arge supply of drugs and medicines and surgical instruments. The medicines are all given out under the personal supervision of Dr. Hinckley. In this department is kept a record of every case in the asylum. Every morning a record is sent in, of just how each patient acted through the night. If medicine has been given the kind is stated and the quantity given, the time and the effect upon the patient's system. New cases are noted, day and night, and a care ful record kept, as to behavior, health appetite, sleep, and all peculiarities.

East Orange.

The new hose carriage for Ashland Hose Company, No. 1, which arrived on Friday of last week, from the Silsby Manufacturing Company, of Seneca Falls, New York, is a very handsome and serviceable apparatus. The wheels, pole and all the woodwork are painted jet black and ornamented with go d and red. The outside of the reel, the springs, the hubs, the bells, the trumpets and all the metal work except a few brass ornaments are of nickel. There are three bells on the front of the carriage, and the forward lamp is red glass, very prettily ornamented. The figure head is a brass fireman; the rear bar across the carriage is surmonted with a brass eagle, under which is suspended a p ate bearing the names of the committee appointed to purchase the carriage. It is twenty-one feet over all and eight and one-half feet in height. The reel will contain n ore than 1,000 feet of hose. The regular meeting of the Township Committee was held on Monday evening.

Mr. Joseph L. Munn, attorney, was heard in relation to the apportionment of taxes on property on North Park street, own d by Philmore Condit, Josephine D. Soverel, and Matthias Soveral. On his suggestion 75 per ct. of the taxes was assessed against the larger tract and 25 per cent. against the smaller. The Finance Committee were given authority to hear further proposals in regard to the Soverel-Condit armarage of taxes. After hearing Mr. D. Ropes in relation to the application for an apportionment of taxes upon the estate of Caroline Harrison, the affair was refered to the Finance Committee to investigate and report. Mr. Joues of the Sewerage and Drainage Committee. reported very favorable progress. He said that the work was being carried on by night and by day and in cases of necessity on Sunday. Several small warrants were issued, among which was one for \$836.67 for the payment of improvement bonds

KILL THOSE MOTHS OR THEY WILL KILL YOUR FEATHERS.

COOPER & VOORHEES, STEAM

Feather, Mattress and Carpet Renovating Works,

326 BROAD ST., NEWARK. As many parties are not aware what the process of Renovating is, we will endeavor In the first place, all feathers new or old have a certain matter in the end of each quill, which, if not removed by some process, will become putrified and give forth a bad odor which is very disagreeable as well as extremely unhealthy.

This matter also generates the moth worm, which entirely destroys the feathers.

A thorough Renovating by steam and hot air effectually removes this matter, make ing the feathers pure and sweet, and is sure death to all moths. After years of use feathers become worn and matted. A thorough Renovating renews the life and elasticity, bringing out all the small fibres of the feather, increasing the BULK of bed or pillow from one-third to one-half. The BEST OR POOREST MATTRESS will get hard, matted and hollow in the centre with We make them over as good as new, at a small expense. One-third of your life is spent in bed, and IT IS NOT HEALTHY to sleep on pillows, beds or mattresses without having them Renovated occasionally. If you value good health and a comfortable sleep, have your Beds, Pillowa and

PURE JERSEY or ALDERNEY MILK,

GLASS BOTTLES!

PURE JERSEY or ALDERNEY MILK in QUART GLASS BOTTLES with elivered by me, and the patronage of the public is solicited. The Milk offered is warranted perfectly pure, and is from imported Jersey Cattle. The Cattle are fed on the BEST of hay and feed, no feed being allowed them that would impair the healthfulness of the Milk. The stables and cattle are kept in the most perfect manner as to Cleanliness and

Ventilation-a most important factor if healthy milk is desired. As a table article and beverage it recommends itself, showing a larger percentage of cream than any other Milk sold. For invalids and children it is recommended by all physicians. MILK IN GLASS HAS THE FOLLOWING ADVANTAGES:

1st. It is more cleanly not being exposed to odors and contamination, to blowing dust and dirt, to the rain, to the drip and dirt from the reins or hands of the driper. 2d. Its quality may be seen at a glance by the cream at the top, and the color of 3d. It will keep sweet longer, because in delivering there is no churning (each bottle being filled to the stopper,) and the bottles are kept iced in warm weather until 4th. Its flavor is better, because the air has no chance to act upon it, and be-

cause it is absolutely free from the metallic flavor often noticed in milk transported Parties wishing to be served can call at farm in Bloomfield, or send postal to JOHN F. MAXFIELD, Bloomfield, N. J
